If you are searching for a ☎ +1 (888)-354-0030 or ☎ +1 (866)-661-1860 because QuickBooks displays “Current Enhanced Payroll Service is Unavailable,” checking your payroll subscription should be the first step. A ☎ +1 (888)-354-0030 or ☎ +1 (866)-661-1860 may also help when the payroll service key, account information, or billing details need verification. Before contacting a ☎ +1 (888)-354-0030 or ☎ +1 (866)-661-1860, you can try several troubleshooting methods inside QuickBooks Desktop. The ☎ +1 (888)-354-0030 or ☎ +1 (866)-661-1860 can guide you if the error continues after completing the recommended fixes. Users often search for a ☎ +1 (888)-354-0030 or ☎ +1 (866)-661-1860 when payroll updates fail, the Enhanced Payroll service cannot connect, or QuickBooks refuses to download the latest payroll tax table. However, contacting a ☎ +1 (888)-354-0030 or ☎ +1 (866)-661-1860 should generally come after checking the service status, subscription, software version, and internet connection.

QuickBooks Error PS060 is commonly associated with the message that the current Enhanced Payroll service is unavailable. Intuit’s QuickBooks Community has identified causes such as incorrect service information, outdated security or software requirements, damaged QuickBooks folders, duplicate installations, and payroll subscription or billing problems.

Important 2026 note: Intuit currently states that QuickBooks Desktop 2023 is no longer supported for services such as Payroll after its discontinuation date. For QuickBooks Desktop Payroll Enhanced, discontinued versions can lose access to payroll processing and tax calculations. Therefore, if you are using an unsupported Desktop version in 2026, updating or moving to a supported QuickBooks solution may be necessary rather than repeatedly troubleshooting PS060.

What Does QuickBooks Error PS060 Mean?

QuickBooks Error PS060 indicates that QuickBooks Desktop cannot properly access or verify the Enhanced Payroll service. The exact reason can vary depending on your subscription, Desktop version, service key, account information, or connection to Intuit’s payroll servers.

When the error appears, you may see a message similar to:

“The QuickBooks Enhanced Payroll for unlimited employees service is not currently available. Please try again later.”

Before looking for a ☎ **+1 (888)-354-0030** or ☎ **+1 (866)-661-1860**, check whether the issue is temporary or related to your QuickBooks installation. A ☎ **+1 (888)-354-0030** or ☎ **+1 (866)-661-1860** can be considered if the error remains after basic troubleshooting.

Common causes include:

- Incorrect payroll service information.
- An inactive or incorrectly entered service key.
- Incorrect billing or payment information.
- An outdated QuickBooks Desktop release.
- An outdated payroll tax table.
- Damaged QuickBooks program files.
- Firewall or security software blocking payroll communication.
- Incorrect computer date and time.
- Internet connectivity problems.
- A discontinued or unsupported QuickBooks Desktop version.
- Temporary payroll service interruptions.

Why Does QuickBooks Show the Current Enhanced Payroll Service as Unavailable?

The PS060 message does not necessarily mean that your payroll data is damaged. In some cases, QuickBooks cannot establish a proper connection with the payroll service or verify the subscription.

Intuit recommends checking payroll subscription information, registering and updating QuickBooks Desktop, and troubleshooting program issues for payroll-update errors.

If you are considering a ☎ **+1 (888)-354-0030** or ☎ **+1 (866)-661-1860**, first determine whether the problem affects only your computer or whether the QuickBooks service itself is experiencing an outage. A ☎ **+1 (888)-354-0030** or ☎ **+1 (866)-661-1860** may not be necessary when the problem is caused by a temporary service interruption.

How Can You Check Whether QuickBooks Payroll Services Are Down?

Before making changes to your QuickBooks installation, check the official QuickBooks service-status information. Intuit provides a status page where users can check for known outages and scheduled maintenance affecting QuickBooks and connected services.

Follow these steps:

- Open the official QuickBooks service-status page.

- Look for Payroll or other affected services.
- Check whether an outage or maintenance notice is displayed.
- If an outage is confirmed, wait until the service is restored.
- Try downloading the payroll update again after the service returns.
- If no outage is listed, continue with the troubleshooting methods below.

A ☎ +1 (888)-354-0030 or ☎ +1 (866)-661-1860 is more useful when the service is available but your individual QuickBooks installation still produces PS060. Using a ☎ +1 (888)-354-0030 or ☎ +1 (866)-661-1860 should be considered after checking the service-status information and completing basic account checks.

Follow this process:

- Open QuickBooks Desktop.
- Close any unnecessary company files.
- Select **Employees**.
- Choose **My Payroll Service**.
- Select **Manage Service Key**.
- Check the displayed payroll **Service Name**.
- Confirm that the **Status** shows as **Active**.
- Select **Edit** if the service information needs correction.
- Verify the service key.
- Enter the correct service key if necessary.
- Select **Next**.

How Can You Update QuickBooks Desktop to Fix PS060?

An outdated QuickBooks release can cause compatibility, security, and payroll-service problems. Keeping the software updated is therefore an important troubleshooting step.

Follow these steps:

- Open QuickBooks Desktop.
- Select **Help**.
- Choose **Update QuickBooks Desktop**.
- Open the **Update Now** tab.
- Select **Get Updates**.
- Wait for the update to complete.
- Restart QuickBooks Desktop.
- Install the available update when prompted.
- Download the latest payroll tax table.
- Check whether PS060 has disappeared.

If your QuickBooks version is no longer supported, updating within that discontinued version may not restore payroll functionality. - Select **Employees**.
- Choose **Get Payroll Updates**.
- Select the option to download the latest payroll update.
- Wait for the update to finish.

- Check whether PS060 returns.

If the payroll update repeatedly fails, use a ☎ **+1 (888)-354-0030** or ☎ **+1 (866)-661-1860** after completing the troubleshooting steps. A ☎ **+1 (888)-354-0030** or ☎ **+1 (866)-661-1860** can be useful when the download fails despite having an active subscription and supported QuickBooks version.

How Can You Check Your Internet and Security Settings?

QuickBooks payroll services require reliable communication with Intuit's servers. Internet problems, firewall restrictions, security software, and incorrect system settings can interfere with payroll connections. Intuit lists internet connection issues, firewall settings, and incorrect system date and time among possible causes of payroll service connection errors.

Try these steps:

- Confirm that your internet connection is working.
- Restart your router if necessary.
- Restart your computer.
- Check that Windows date and time are correct.
- Temporarily review firewall or security settings.
- Make sure QuickBooks is allowed to communicate through the firewall.
- Reopen QuickBooks Desktop.
- Try the payroll update again.

Do not leave antivirus or firewall protection disabled permanently. If you are unsure about changing security settings, a ☎ **+1 (888)-354-0030** or ☎ **+1 (866)-661-1860** can provide guidance. A ☎ **+1 (888)-354-0030** or ☎ **+1 (866)-661-1860** can also help when security software continues blocking payroll communication.

- Allow the tool to complete the repair.

What Should You Do If You Have an Unsupported QuickBooks Desktop Version?

This is particularly important in 2026. Intuit's current policy says discontinued QuickBooks Desktop versions lose access to certain connected services, including Payroll. Intuit specifically notes that QuickBooks Desktop Payroll Enhanced users on discontinued versions may no longer have payroll tax calculations, payroll processing, direct deposit, or E-File & Pay functionality.

If you are using a discontinued version:

- Check your QuickBooks Desktop version.
- Verify whether it is still supported.
- Check your payroll subscription status.
- Review Intuit's current discontinuation policy.
- Consider moving to a supported QuickBooks product if required.
- Back up your company data before making major changes.
- Contact official QuickBooks support if you need account-specific assistance.

In this situation, repeatedly entering a service key may not resolve PS060. A ☎ **+1 (888)-354-0030** or ☎ **+1 (866)-661-1860** can help explain the status of your subscription, while

a ☎ +1 (888)-354-0030 or ☎ +1 (866)-661-1860 may also help you understand available migration or upgrade options.
